- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- We analyzed a modified subset of Stack Overflow data consisting of two different datasets based on demographics and technologies in order to present both present and future trends.
- IBM Cognos Dashboard Embedded (CDE) helped visualize the results
- Current Technologies Dashboard: JavaScript results as the most popular language, while MySQL was the most popular database. Linux and Window results as preferite platforms to work and jQuery the favorite web frame.
- Future Technology Trend: JavaScript results as the favorite language to learn
- Demographics Dashboard: The majority of the respondants were male, resident in USA and India, with an ages between 21-43. Thus, the majority of the respondents hold a master/bachelor's degree.

METHODOLOGY

- We started from scraping the two datasets from a modified subset.
- Thus, they didn't need any type of cleaning procedure, because the purpose of the project, but only a filter option to ignore the null values in the visualization.
- Using CBE and also Google Looker, we were able to create different dashboard to better get further in the analysis.

RESULTS

PROGRAMMING LANGUAGE TRENDS

Current Year

Top 10 Language Worked With

Next Year

Top 10 Language Desire Next Year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

FINDINGS

JavaScript : the most widely used languages – 14,798 users

HTML/CSS and SQL: these are also very popular programming languages – 8567 and 7830 users

PHP and Bash/Shell/PowerShell: Less usage

IMPLICATIONS

JavaScript is continuing its dominance in both development and beyond, because it is both widely used.

Python's has a strong presence, because of its versatility and growing adoption (especially in AI, Machine Learning).

TypeScript's is rising in popularity

DATABASE TRENDS

Current Year

Top 10 Database Worked With

Next Year

Top 10 Database Desire Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

FINDINGS

MySQL: most used database because of its utilization in various applications.

PostgreSQL and Microsoft SQL Server: significant

SQLite and MongoDB: moderate

IMPLICATIONS

PostgreSQL shows a rising position as the most desired databases, due to its versatility.

MongoDB: rising demands, increasing the importance of NoSQL for unstructured data.

Continues the interest for Redis

DISCUSSION

- The data demonstrates growing technology trends, with **JavaScript** remaining the most popular and requested language. Rising interest in **Python** and **TypeScript** reflects an emphasis on adaptability and rigorous typing, whereas Go's popularity indicates a trend towards performance-driven programming.
- In **databases**, the preference for **PostgreSQL** over MySQL reflects an increasing desire for feature-rich, scalable, open-source alternatives. The growing interest in **MongoDB** highlights the necessity of NoSQL databases for managing unstructured data. Overall, developers are flocking towards current, scalable technologies, emphasising the importance of adaptability in order to remain competitive.

OVERALL FINDINGS & IMPLICATIONS

FINDINGS

JavaScript remain most widely used and desired

PostgreSQL is surpassing MySQL in future demand

Python and TypeScript are gaining a shift toward versatility and strong typing

IMPLICATIONS

Developers and organizations should prioritize learning **JavaScript** and **Python** to stay relevant.

Adopting **TypeScript** can enhance code reliability in JavaScript ecosystems

Shifting to **PostgreSQL** can provide advanced features and scalability for modern applications.

CONCLUSION

- JavaScript continues to dominate as the most essential programming language for developers.
- The rising interest in Python and TypeScript signals a trend towards versatile and strongly-typed languages.
- PostgreSQL is becoming the preferred database, reflecting a shift towards scalable, feature-rich open-source solutions.
- To remain competitive, developers should focus on modern technologies like Go and NoSQL databases (e.g., MongoDB) that align with current industry trends.
